

Sylvan Lewis . Jarvis Consulting

I bring a balanced perspective and professional experience through my studies in Political Science within York University, and past Software Engineer experience at TD Bank. Working within the EDMO Standards and Procedures team at TD Bank, I focused on process analysis, data governance, and improving operational workflows across data management practices. What excites me about the BSA role is its synthesis with technical and business tasks. I am passionate about creating structured, scalable processes that support innovation and long-term impact.

Skills

Proficient: Python, Data Analytics, SQL/RDBMS, Agile/Scrum, Git

Competent: Java (Spring Boot), Javascript, Jira/Confluence, Cloud Platforms, Figma

Familiar: Linux, Bash, Docker, Selenium/JUnit, REST APIs, Excel

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_SylvanLewis

Cluster Monitor [GitHub]: Built a PostgreSQL hardware usage monitor for a Linux cluster environment using Bash scripting and Docker to run services within a closed network.

RDBMS & SQL [GitHub]: Analyzed a resort dataset containing facility, reservation, and member information by organizing the data into a relational PostgreSQL database running on Docker, and translating business questions into SQL queries.

Core Java App [GitHub]: N/A

Springboot App [GitHub]: N/A

Python Data Analytics [GitHub]: Analyzed two years of e-commerce transactional data for the London Gift Shop using Python (Pandas) and SQL to perform RFM customer segmentation, evaluate Q4 revenue seasonality, and identify growth opportunities across international buyer segments.

Hadoop [GitHub]: N/A

Spark [GitHub]: N/A

Cloud/DevOps [GitHub]: N/A

Highlighted Projects

Personal Expense Manager [GitHub]: Developed a Java-based expense tracking application that manages budgets, categorizes spending, stores financial data persistently, and generates reports to help users analyze spending habits.

Professional Experiences

Business System Analyst, Jarvis (2026-present): Building scalable PostgreSQL pipelines via Docker and Shell, optimizing SQL Architectures, and delivering data-driven insights using Python, Pandas and hardware-monitoring analytics.

Associate Software Engineer, TD Bank (2024-2025): Supported data governance standards and procedures, collaborated on Python-based data ingestion workflows within Collibra, and updated Critical Data Elements (CDEs) through Jira.

Education

York University (2025-present), Bachelor of Arts, Political Science - Oussama J. Marrow Memorial Award” - “TD Meloche Monnex Bursary” - ”Tom Janes Award for Black Scholars

Humber College (2018-2020), Diploma in Paralegal Education, Paralegal Education

Miscellaneous

- IBM Data Analytics (2024)
- Azure AI Fundamentals (2024)
- Dedicated parent balancing professional growth with active family engagement
- Maintaining an active personal routine through regular strength training and fitness
- Actively contributing to local urban forest conservation and environmental sustainability programs
